

## DMT AL BROADCASTASIA 2006

As an all-encompassing event that includes Digital Multimedia Technology, Professional Audio and Cable & Satellite, BroadcastAsia is the industry's preferred marketplace in Asia Pacific for both hardware and software. BroadcastAsia 2006 will be held in conjunction with CommunicAsia 2006 at Singapore Expo, next 20-23 June 2006.

On that occasion, DMT will be exhibiting their full analog/digital equipment lineup, including:

- digital integrated exciter, also in DVB-H standard for transmission to "handheld" receivers, suitable to be incorporated in the whole range of DMT digital transmitters, with output power ranging from 1W up to over 5kWrms.
- liquid-cooled "High Power" transmitters, available in digital and "digital ready" configurations, whereby the latter can be converted to digital operation by simply adding the exciter.
- air-cooled "Medium-High Power" transmitters, in digital and "digital ready" analog versions, also available with the "split-type" amplifier module that simplifies maintenance with its structure divided into two sub-modules.
- "Low Power" transmitters, with a focus on the new configuration for digital transmission, equipped with a booster unit delivering up to 25Wrms within very compact dimensions.
- digital, analog and "dual cast" repeaters featuring high selectivity and performance quality.

DMT will also introduce its activity in the following areas:

- Radio Links: digital and analog, capacity up to 155 Mbit/s, available in frequency bands from 5GHz to 23GHz.
- Antenna systems for analog and digital TV and radio applications, all frequency bands. The COEL brand, now detained by DMT, stands for a longstanding experience in this field, meeting any specific application requirements with optimized solutions.

We are looking forward to meeting you at our Booth 7L4-01 to show you the latest developments of our world-class technology, and to offer you a cup of coffee.
