

DMT ALL'IBC 2006

The International Broadcasting Convention IBC 2006, The World of Content Creation Management and Delivery, will take place in Amsterdam, The Netherlands, next September 8-12.

On the occasion of IBC06, DMT will be exhibiting their full analog/digital equipment lineup, including:

- Digital, analog "digital ready" and "dual cast" transmission system configurations, the latter capable to instantaneously switch from analog to digital operation and back, available on all systems produced by DMT.
- DVB-H transmission systems, featuring excellent characteristics that have been proven in the frame of the rollout of the two commercial DVB-H networks now in progress over the Italian area.
- Integrated DVB-T exciter, frequency agile, with digital precorrection
- New solutions to implement compact and efficient transcoders (with satellite reception), repeaters and gap-fillers
- Air-cooled "Medium-High Power" transmitters - also available with the new amplifier module that simplifies maintenance with its "split" structure divided into two sub-modules;
- Liquid-cooled "High Power" transmitters, of proven reliability and performance;
- Antenna systems for all frequency bands, for analog and digital TV and radio applications. In particular, the omnidirectional antenna, specifically designed for DVB-H, will be presented.

We are looking forward to meeting you at our Stand 8.341, to show you the latest developments of our world-class technology, and to offer you a cup of coffee.

Best regards,

DMT
